

Customer Success Story

HiBob

Bob is an HRIS platform that helps dynamic and modern companies bring out the best in their employees. Our HR software is unique, intuitive, and smart.

The customer

Founded in 2015, HiBob is a modern HR platform for modern, multi-national business. With offices across the globe and employee solutions for nearly every type mid-sized business, they have become one of the most formidable players in the HR tech ecosystem. And now, just seven years since they opened, their intuitive and data-driven platform is helping companies world-wide uncover the power of HR, to drive employee productivity, engagement, collaboration, and retention.

The Challenge

The HiBob security team was looking for a single pane of glass into their cloud posture across configuration and actual activity. The goal was to save time on unnecessary repetitive connectivity research and enabling the team to quickly understand the status of the environment and the historic changes that led to it.

Lightlytics significantly shortens cloud security investigation processes and time to root cause"

Tamir Ronen, CISO

With Lightlytics analyst time that was previously spent on figuring out resource communication and configuration can now be spent on advanced security research. Freeing up cycles allows for better and faster mitigation and remediation."

Tamir Ronen, CISO

How Lightlytics platform addresses Bob's challenges:

1

The queryable posture graph significantly reduces the time it takes to understand connectivity and permissions in the environment, saving critical time when responding to a security alert.

2

The Lightlytics activity layer that shows all of the real traffic on every path and resource is a strong and efficient forensic tool when researching and tracing a potential adversary.

3

By using the Lightlytics policy capability the team is able to enforce security best practices during build time. If a PR violates a security policy the CI/CD process can block it prior to the code being deployed and prevent the security issue.

Lightlytics provides a collaborative change intelligence solution for all teams who work on AWS configuration changes. The Lightlytics platform helps cloud operations teams identify and fix root causes of incidents in minutes, investigate security incidents more efficiently, and troubleshoot cost for their environments.

The platform's CloudTwin technology continuously tracks incremental changes to create a precise, up-to-date model of your environment. It utilizes dynamic algorithms to detect dependencies across resources, providing context for various aspects of operations such as availability, security, compliance, and cost.

Leading cloud-native teams use Lightlytics to:

- Detect and troubleshoot AWS changes effectively with the complete real-time context of their AWS configuration, environments, machine and user activity.
- Get a complete understanding of their AWS posture across cloud accounts, regions and Kubernetes clusters.
- Share and enforce best practices through architectural standards.

Including

Lightlytics customers report significant benefits including:

Hibob security and operations teams can troubleshoot and act on tasks 4x to 10x faster.

Wego achieves 40% lower cost compared to alternatives

Kaltura gains unmatched visibility that previously required multiple tools and manual correlation

Lightlytics offers a free AWS Well-Architected Assessment, providing an in-depth review of your AWS environment against the pillars of the AWS Well-Architected Framework. The platform also features a range of resources such as whitepapers, webinars, and blog posts, covering topics like IAM issues, EKS cluster autoscaler problems, Kubernetes network policies, and cost reduction strategies.
